

EZip Format

Eliminate Errors, Save Time and Import Data Effortlessly!

The first industry-driven standard format for product data.

InfoComm's Systems Integration Leadership Council (SILC) concluded that the Excel format is the most effective "common language" form to capture standard pricelist data, making the EZip format useful for both manufacturers and dealers.

Manufacturers and dealers can now list their data uniformly and share it quickly and efficiently. The EZip format streamlines data entry and makes it easy to transfer product and pricing information between various computer systems.

NEW in 2010 for Manufacturers! Before you send out your EZip file, run it through the newly created . Simply extract the files to the location of your choice, select the EZip file you'd like to check for errors and in seconds you will find out if your file complies with the guidelines of the EZip format. You can now send your populated EZip file to the dealers you work with knowing that they can seamlessly and effortlessly integrate your pricing into their systems.
